ELECTRONIC MULTI-MEASURING INSTRUMENT ME96SS

SS Ver.B

Super-S Series

ME96 Super-S Series Electronic Indicating Instruments functions and optional units

SS Ver.B
Super-S Series

Highly appreciated ME96SS Series Electronic Multi-Measuring Instruments measuring functions and network capability has been released.

① ME96SSHB-MB (high-performance model)

Major features

[1] Supports highly accurate measurement (accuracy of current/voltage: 0.1%, active energy: class 0.5S) and high-order harmonic measurement (1st to 31st).

[2] Incorrect wiring determination support function

[3] Wide viewing angle LCD

[4] Built-in logging function

[5] Display 4 items at the sametime

② ME96SSRB-MB (standard model)

Major features

[1] Incorrect wiring determination support function

[2] Wide viewing angle LCD

[3] Built-in logging function

[4] Display 4 items at the sametime

③ ME96SSEB-MB (economy model)

Major features

[1] Compact size

[2] Incorrect wiring determination support function

[3] Display 4 items at the sametime

with enhanced measuring

have been remodeled, and ME96 Super-S Series **SS** *Super-S Series* with enhanced.

④ Optional plug-in modules

Major features

[1] MODBUS TCP communication unit

[2] Data logging unit

[3] CC-Link communication unit

[4] Digital input and output unit

[5] Analog, pulse and alarm output unit

Remarks

MODBUS RTU communication function provided as standard

Contents

Outline and Features

Compact size

● Realized downsizing for ME96SSEB-MB.

90.2mm
(110.9mm)
20.7mm
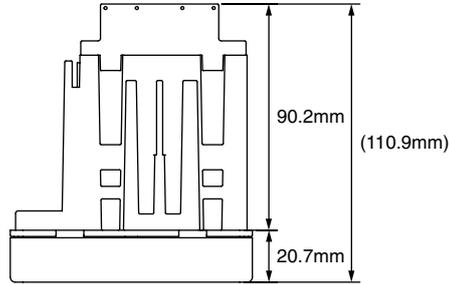

ME96SSEA-MB
(Conventional type)

It contributes to
space saving!

36.0mm
13.0mm
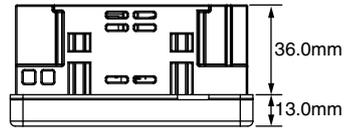

ME96SSEB-MB
(New type)

Improved Measurement Functions

● Added measurement function, reactive energy, apparent energy, reactive power and apparent power for ME96SSEB-MB.

| Model name	Transmission/Option specifications	Main measurement items
ME96SSHB-MB (High-performance model)	MODBUS RTU communication Plug-in module (options) • Analog/Pulse/Contact output/input • CC-Link communication • Digital input/output (for MODBUS RTU communication) • Backup (on SD card) • MODBUS TCP communication	A, DA, V, Hz = ±0.1% W, var, VA, PF = ±0.2% VAh = ±2.0% Wh = class 0.5S (IEC62053-22) varh = class 1S (IEC62053-24) Harmonics = 31st-deg (max) Rolling demand = W, var, VA
ME96SSRB-MB (Standard model)	MODBUS RTU communication Plug-in module (options) • Analog/Pulse/Contact output/input • CC-Link communication • Digital input/output (for MODBUS RTU communication) • Backup (on SD card) • MODBUS TCP communication	A, DA, V = ±0.2% Hz = ±0.1% W, var, VA, PF = ±0.5% VAh = ±2.0% Wh = class 0.5S (IEC62053-22) varh = class 1S (IEC62053-24) Harmonics = 19th-deg (max) Rolling demand = W, var, VA
ME96SSEB-MB (Economy model)	MODBUS RTU communication	A, DA, V = ±0.5% Hz = ±0.2% W, var, VA, PF = ±0.5% VAh = ±2.0% Wh = class 0.5S (IEC62053-22) varh = class 1S (IEC62053-24) Harmonics = Only total

Optional Plug-in Modules

Model name	Analog output	Pulse/Alarm output	Contact input	Contact output	Transmission function	Used with
ME-4210-SS96B	4	2	1	—	—	ME96SSHB-MB ME96SSRB-MB
ME-0040C-SS96	—	—	4	—	CC-Link	
ME-0052-SS96	—	—	5	2	—	
ME-0000BU-SS96	—	—	—	—	SD CARD	
ME-0000MT-SS96	—	—	—	—	MODBUS TCP	

Note: Optional Plug-in Module can not be used with ME96SSEB-MB.

MODBUS RTU System
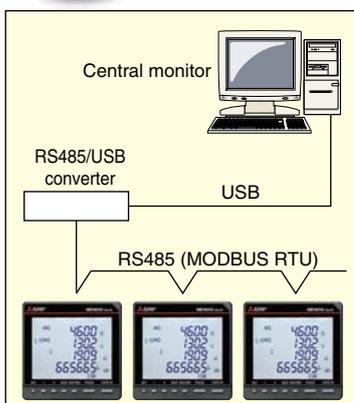

● MODBUS RTU communication system optimizes computer monitoring operations.
● In addition, when ME-0052-SS96 is installed, remote monitoring of contact input signals and on/off control of contact output signals are possible. Therefore, no other DI/DO terminals are required.
● Digital input signals can be latched for over 30ms, and there is no need for external latch circuits.

Central monitor

RS485/USB converter

USB

RS485 (MODBUS RTU)

ME-0052-SS96 optional unit

Tripping
Closing
AL
PAL
TAL
Turning on/off breaker, etc.
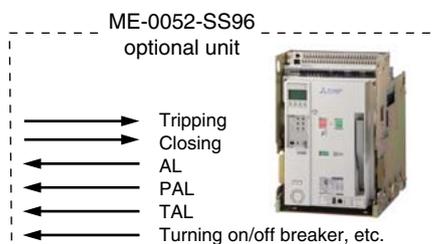

<MODBUS RTU Interface Specifications>
• Max. Baud rate: 38.4kbps
• Max. Connection Distance: 1,200m
• Max. Connection Units: 31

<Optional Plug-in Module ME-0052-SS96>
• Digital Input: 5 points (24VDC)
• Digital Output: 2 points (35VDC)

CC-Link System (ME96SSHB-MB/ME96SSRB-MB with ME-0040C-SS96 (optional plug-in module))

Ethernet

MELSEC Series

CC-Link
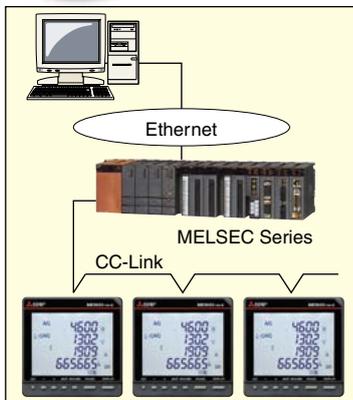

● Optimum transmission system for remote monitoring using Mitsubishi PLC
● Contact signals can be remotely monitored by installing the optional module ME-0040C-SS96. This is helpful in wiring and space saving.
● Digital unit signal can be latched for over 30ms, and there is no need for external latch circuits

← Abnormal Signal (Facility)
← Abnormal Signal (Earth Leakage)
← Abnormal Signal (Temperature)
← Circuit Breaker Status Signal, etc.

<CC-Link Interface>
• Max. Baud rate: 10Mbps
• Max. Connection Distance: 100m (10Mbps)- 1,200m (156kbps)
• Max. Connection Units: 42
• Digital Input: 4 points (24VDC)

Analog/Pulse/Alarm Output System (ME96SSHB-MB/ME96SSRB-MB with ME-4210-SS96B (optional plug-in module))

Ethernet

Analog output
Pulse output
Alarm output
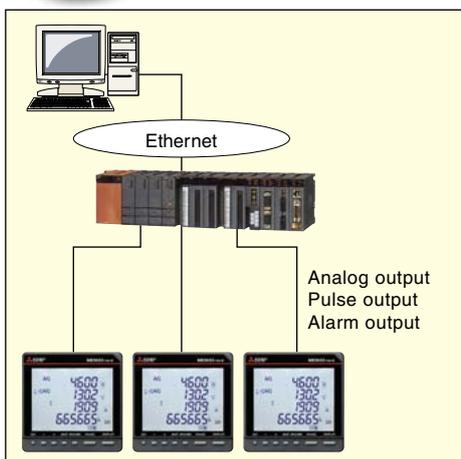

● Applicable to analog output, pulse output and alarm output with the aid of the optional module ME-4210-SS96B
● Remote monitoring of A, DA, V, W, var, VA, PF, Hz, Harmonics Current RMS value and Harmonics voltage RMS value at 4 to 20mA output (max. 4 outputs)
● Active energy, reactive energy, apparent power and periodic energy can be monitored by pulse output (max. 2 pulses)
● Can remotely monitor upper/lower limit alarm by contact output (max. 2 points)

<Analog output specifications>
• 4-20mA
• 4 outputs
• Resistance load 600Ω or less
<Pulse output specifications>
• No-voltage a contact point
• 35VDC, 0.1A
• Select output from pulse widths of 0.125, 0.5 or 1s

<Alarm output specifications>
• No-voltage a contact point
• 35VDC, 0.1A
<Digital input specifications>
• 1 point (24VDC)

MODBUS TCP Communication (ME96SSHB-MB/ME96SSRB-MB with ME-0000MT-SS96 (optional plug-in module))

● This is a MODBUS TCP communication unit that can be used in the Ethernet system. The number of network system selection methods is increased, and Ethernet and MODBUS RTU communication can be duplicated.

Ethernet

SWITCH / HUB

PLC
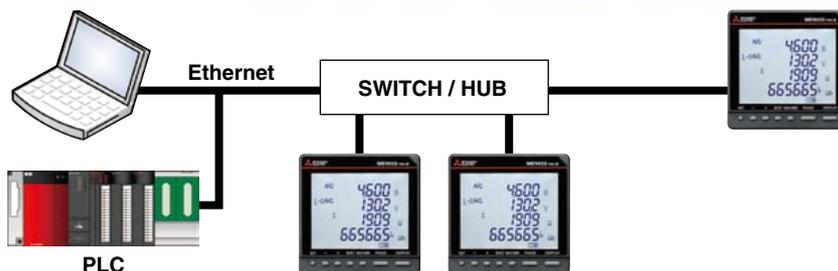

Data Logging (built-in logging function and optional plug-in module)

● ME96SSHB/ME96SSRB are available with built-in logging function and an optional module (ME-0000BU-SS96) which can retain data even when communication cannot be established.

CSV file data

2GB

Data in more than one logging unit can be managed with one SD memory card.

Note: Use the SD memory card (EMU4-SD2GB) made by Mitsubishi Electric.
Use of any memory card other than our product (EMU4-SD2GB) is not covered by the warranty.

ME96 Super-S Series Ver.B Features

Succeeded Display Functions

Concurrent Display of 4 items

The 4 measured values can be digitally confirmed on one screen.

Bar graph display
3 lines of digital display
Conventional type

4 lines of digital display
New type
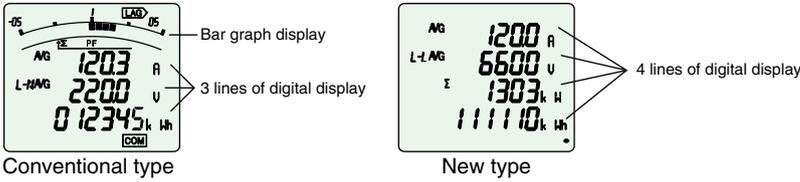

● Concurrent Display of Each Phase Measured Values
In Display Pattern P02, measured values of each phase can be concurrently displayed.
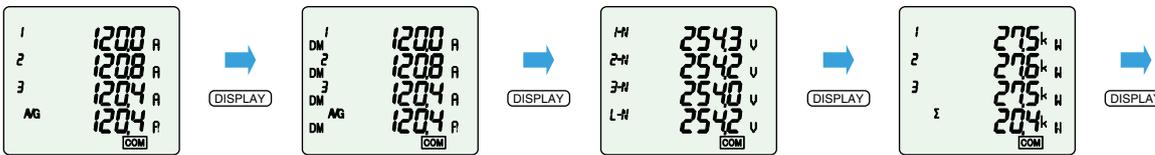

● Cyclic Display Function

In the cyclic display function, the display screen can be changed over in every 5 seconds without [DISPLAY] button operation.

Special Display Function

● Special Display by Display Pattern P00
Display can be selected as desired Display Pattern P00.

1st to 3rd line: Select from A, DA, V, W, var, VA, PF, Hz

4th line: Select from Wh, -Wh, varh, VAh

Maximum of four displays can be set
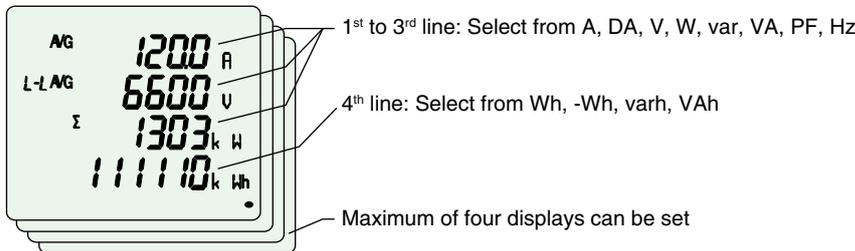

Max/Min Display Function

● Maximum/Minimum Value Display
The maximum and minimum value of each measuring items can be displayed. Since the max/min display shows the current value as well as max/min values, the display can be used for monitoring.

Wide-viewing-angle (ME96SSHB-MB, ME96SSRB-MB)

As the wide-viewing-angle LCD is mounted, good visibility is obtained even when the instrument is mounted at a level lower than the eye line.

Type	Model number	When viewed from the side		When viewed from the above	
		Up	Down	Left	Right
New type	ME96SSHB-MB ME96SSRB-MB	60°	60°	60°	60°
Old type	ME96SSHA-MB ME96SSRA-MB	10°	60°	60°	60°

Note: ME96SSEB-MB has the same viewing angle as the old type.

5
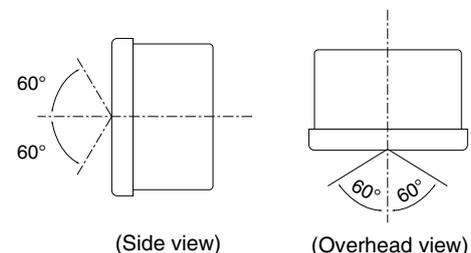

Impressive Monitoring Functions

Advanced Alarm Display

(1) A function to blink the backlight upon occurrence of an alarm is provided.
The product has a setting function to blink the backlight upon occurrence of an alarm.
(2) The automatic or manual alarm cancel mode can be selected.
(3) Up to four points of upper and lower limits can be monitored.
(4) The alarm output delay time (alarm mask time) can be set.
Time of alarm output after the maximum value and minimum value is reached can be set.
With this function, alarm output caused by frequency change at start-up current of a motor and start-up of private power generating facility can be avoided.
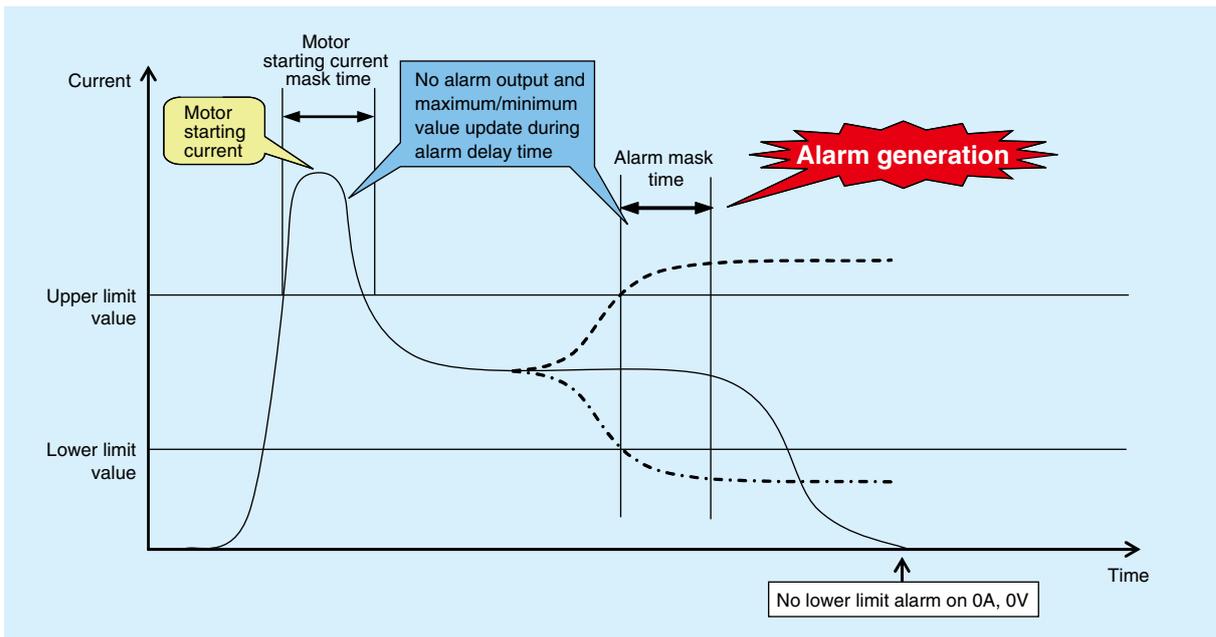

Motor Starting Current Mask Function

The use of the motor starting current mask function for monitoring the motor current can prevent updating of the maximum value and alarm output caused by the motor starting current.
Although the maximum value is not updated, the current value is displayed.
The starting current mask time can be set in the range from 1s to 5min.
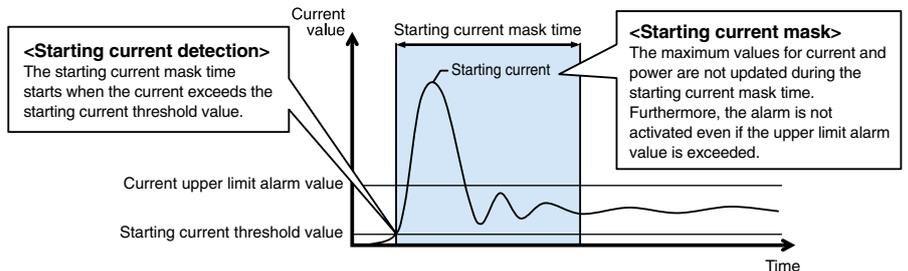

Note: Set the starting current threshold to a value lower than the lower limit value in consideration of fluctuations in load current during operation.

ME96 Super-S Series Ver.B Features

Variety of Complementary Features

Password Function

With the password function, the following items can be protected from an accidental execution.

No.	Password-protected item	No.	Password-protected item
1	Shift to the setting mode	5	Adjust the time limit of rolling demand
2	Reset the max./min. values	6	Reset the peak value of rolling demand
3	Reset the value of active energy, reactive energy and apparent energy	7	Reset the value of operating time
4	Reset the value of periodic active energy		

Special Primary Voltage/Current and Special Secondary Voltage are settable

(1) Special primary current

1A-30kA

(2) Special primary voltage

60V-750kV

(3) Special secondary voltage

Three phase 4-wire system

[63.5V, 100V, 110V, 115V, 120V]

Three phase 3-wire, Single phase 2-wire system

[100V, 110V, 220V]

Periodic Monitoring Function

Power consumption can be measured in three individual intervals (e.g., peak, off- peak and shoulder, etc.).

The time segments can be switched according to the setting via communication or the digital input (DI).
(The time segments cannot be switched manually (button operation).)

Power consumption (period 1)

Power consumption (period 2)

Power consumption (period 3)

Rolling Demand Function

Rolling demand is the estimated power consumption in a specified period (interval).
For the block interval demand, select the duration (interval) of the block to be used for demand calculation.

①Rolling block
Use rolling block to set the interval and sub-intervals from 1-60min (1min intervals). Rolling demand is calculated and updated at the end of each sub-interval. However, Present and predictive values are always calculated.
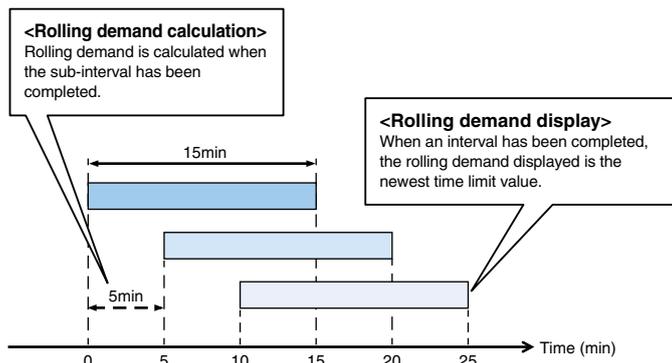

②Fixed block
Use fixed block to set the interval from 1-60min (1min intervals). Rolling demand is calculated and updated at the end of each interval. However, Present and predictive values are always calculated.
(For fixed block, use the same time limits both of interval and sub-interval).

<Example: Interval, 15min; Sub-interval, 5min>

<Rolling demand calculation>
Rolling demand is calculated when the sub-interval has been completed.

<Rolling demand display>
When an interval has been completed, the rolling demand displayed is the newest time limit value.

15min

5min

Time (min)

0   5   10   15   20   25

<Example: Interval, 15min; Sub-interval, 15min>

<Rolling demand calculation>
Rolling demand is calculated when the sub-interval has been completed.

<Rolling demand display>
When an interval has been completed, the rolling demand displayed is the newest time limit value.

15min   15min

Time (min)

0   15   30

Test Function

● A test function is provided to check the wiring for communication, alarm output/contact output, analog output and pulse output without input of voltage or current.
● At the time of wiring test before shipment of the board and counter test for system validation on site, test signals can be output only by applying the auxiliary power.
　Note: Depending on the optional unit and settings, the test function may not be available (may not be displayed).

(1) Communications Test

① Display
　● The same as for the operating mode, display patterns and other data are shown as set.
　● Both maximum and minimum values can be displayed.
② Communication data
　● Communication items and value are the same one on the display. The items value that are not displayed is 0 (zero).
　● Measuring items set for alarm will be displayed at the time of an alarm.
　● Input/Output contact status can be monitored.

(2) Alarm/Contact Output Operation Test

① Displays current alarm and contact status.
② Press the Reset button for 2sec, and regardless if there is an alarm or not, the display and contact output will operate as follows.

Status	Display	Output terminal
Alarm	ON	Closed
No alarm	OFF	Open

(3) Analog Output Operation Test

① Display the output items.
② Press the ⊕ or ⊖ button to change the analog output.
　Note: Default value is 0%.

```
        0%
       25%
       50%
       75%
      100%
```
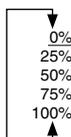

Output	Output specs
	4-20mA
0%	4mA
25%	8mA
50%	12mA
75%	16mA
100%	20mA

(4) Pulse Output Operation Test

Press the Reset button one time to output one pulse.

　Note: After reaching 50, count will return to 1.

0 → 1 → 2 → ··· → 49 → 50 [pulse]

　Note: Default value is 0 pulses.
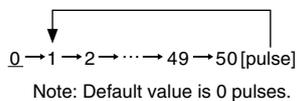

Checking Input Wiring Support Function

Note 1: When wiring of either one of the current/voltage terminals is not correct, the incorrectly connected spot is easily identified.

Note 2: Not all incorrect wirings can be identified. When the voltage input is incorrectly connected and the current input is also incorrectly connected, a different pattern of incorrect wiring may be displayed.

(1) Incorrect wiring pattern display function

● Whether the voltage/current input wirings are correct or not is displayed. As for the incorrect wiring display pattern, see the instruction manual.

Normal state

When Side 1 CT is inversely connected

Incorrectly connected spot is displayed in blinking.

Incorrect wiring pattern No. is displayed.

When incorrect wiring pattern cannot be detected

Display	Content	Display	Content
01	Low voltage	03	Voltage unbalance
02	Low current	04	Incorrect connections at multiple spots

➡ Check by using the incorrect wiring identification support display function.

(2) Incorrect Wiring Identification Support Display Function

● This function displays each phase angle (voltage side 1 standard) of voltage and current, power values (W1, W2, W3) of each phase, voltage value & current values to support identifying incorrect wirings. By knowing abnormality in the phase angle of voltage/current and by comparing it with the normal value, you can more easily identify an incorrectly wired spot.
● Examples of screen displays of incorrect wiring identification support function.

Normal wiring (in the case of 3-phase 4-wire system with power factor 1.0)

Display of phase angle (voltage)　　Display of phase angle (current)　　Display of electric power

Display of current　　Display of voltage

Incorrectly wired

Display of phase angle (voltage)　　Display of phase angle (current)　　Display of electric power

Display of current　　Display of voltage

In the above cases,
① The current phase angle is 210° for Phase 1 and 0° for Phase 3.
② As electric power (W1/W3) is in negative value, it is judged based on the examples of screen displays of incorrect wiring identification support function (See the instruction manual) that Side 1 CT and Side 3 CT are inversely connected.

Standards

All products are compliant with CE Marking, UL Standards, KC mark and FCC/IC.

Specifications

■ME96SSHB-MB

Model name		ME96SSHB-MB	
Phase wire system		3-phase 4-wire, 3-phase 3-wire (3CT, 2CT), 1-phase 3-wire, 1-phase 2-wire (common use)	
Rating	Current	5 A AC, 1 A AC (common use)	
	Voltage	3-phase 4-wire: max 277/480 V AC 3-phase 3-wire: (DELTA) max 220 V AC, (STAR) max 440 V AC 1-phase 3-wire: max 220/440 V AC 1-phase 2-wire: (DELTA) max 220 V AC, (STAR) max 440 V AC	
	Frequency	50/60 Hz (common use)	

Item		Measuring Item	Class
Measuring element	Current (A)	A1, A2, A3, AN, A_{AVG}	±0.1%
	Current demand (DA)	DA1, DA2, DA3, DAN, DA_{AVG}

	Current unbalance rate (Aunb)	Aunb	(Reference)
	Voltage unbalance rate (Vunb)	Vunb	(Reference)
	CO_2 equivalent	kg	(Reference)

Item		Specifications	
Analog output response time		1 second or less (Hz: 2 seconds or less, HI, HV: 5 seconds or less)	
Measuring Method	Instantaneous Value	A, V: RMS value calculation; W, var, VA, Wh, varh, VAh: Digital multiplication; PF: Power ratio calculation; Hz: Zero-cross; HI, HV: FFT	
	Demand Value	DA: Thermal type calculation, DW, Dvar, DVA: Rolling demand calculation	
Display	Display type	LCD with LED backlight	
	Number of display digits or segments	Digital section	First to third line indication: 4 digits, Fourth line indication: 6 digits
			A, DA, V, W, var, VA, PF, DW, Dvar, DVA: 4 digits; Hz: 3 digits; Wh, varh, VAh: 9 digits (6-digit or 12-digit is also available.); Harmonic distortion ratio/content rate: 4 digits; Harmonic RMS value: 4 digits; Operating time: 6 digits; Contact input/output: I/O
	Display update time interval	0.5 s, 1 s (selectable)	
Communication		MODBUS RTU communication	
Built-in logging	Logging mode	Automatic overwrite update	
	Logging data type	Measuring data [*1]	Measuring data and time data are logged at the interval set at the data logging period. (15 min, 30 min, 60 min)
		Alarm log	Time data at alarm generating/cancellation and at waiting for alarm cancellation
		The recorded time of the Max/Min value	Max/Min value data and time data
	Number of logging items	Measuring data	Integrated value data: 5 items, Data other than integrated value: 15 items, Total: A maximum of 20 items
		Alarm log	The number of the set alarms
		The recorded time of the Max/Min value	The total is 19 items: Current Max/Min (AVG), Line voltage Max/Min (AVG), Phase voltage Max/Min (AVG), Total active power Max/Min (AVG), Total power factor Max/Min (AVG), Frequency Max/Min (AVG), Total reactive power Max/Min, Total apparent power Max/Min, Total harmonic current RMS Max value, Harmonic line voltage distortion ratio Max total, Harmonic phase voltage distortion ratio Max total
	Internal memory logging period	Measuring data	30 days (Logging period: 15 minutes), 60 days (Logging period: 30 minutes), 120 days (Logging period: 60 minutes),
		Alarm log	100 records
		The recorded time of the Max/Min value	1 record for every Max/Min value factor
	System log data		100 records
	Saving logging data		Use of nonvolatile memory
	How to acquire logging data		Acquire the logging data via MODBUS® RTU Communication
	Clock accuracy		1 minute difference/Month (typical)
Connectable Optional Plug-in Module		ME-4210-SS96B, ME-0040C-SS96, ME-0052-SS96, ME-0000MT-SS96, ME-0000BU-SS96	
Analog output	Output specifications (Load)	4 mA to 20 mA DC (0 to 600 Ω)	
Pulse/Alarm output	Switch type	Semiconductor relay/No-voltage a-contact	
	Contact capacity	35 V DC, 0.1 A	
	Pulse width	0.125 s, 0.5 s, 1.0 s	
Contact input (DI)	Contact capacity	24 V DC (19 V to 30 V DC), 7 mA or less	
	Signal width	30 ms or more	
Contact output (DO)	Switch type	Semiconductor relay/No-voltage a-contact	
Power interruption backup		Use of nonvolatile memory (Items: settings, MAX/MIN value, active energy, reactive energy, apparent energy, periodic active energy, rolling demand, operating time)	
	Built-in logging	Use of nonvolatile memory (Logging data, System log data)	
VA Consumption	Voltage circuit	Each phase: 0.1 VA (at 110 V AC), 0.2 VA (at 220 V AC), 0.4 VA (at 440 V AC)	
	Current circuit	Each phase: 0.1 VA	
	Auxiliary power circuit	13 VA (at 110 V AC), 14 VA (at 220 V AC), 9 W (at 100 V DC)	
Auxiliary power		100 V to 240 V AC (±15%), 100 V to 240 V DC (-30% +15%)	
Weight		0.5 kg	
Dimensions		96 (H) × 96 (W) × 90 (D) mm	
Mounting method		Embedded	
Operating temperature/humidity		-5°C to +55°C (Daily average temperature: 35°C or less), 0% to 85% RH, Non condensing	
Storage temperature/ humidity		-25°C to +75°C (Daily average temperature: 35°C or less), 0% to 85% RH, Non condensing	

Note 1. The class value represents the ratio to the rated value (100%).
Note 2. For measurement where the harmonic distortion ratio (content rate) is 100% or more, the class can exceed ±1.0%.
Note 3. Harmonic current cannot be measured without voltage input.
Note 4. Using the conventional ME-4210-SS96 (Optional Plug-in Module), the CE marking and UL standards safety certification requirements cannot be met.
*1: Integrated values (Wh, varh, and VAh) are measured values of ME96SS. They are not differential values by logging period.

■ME96SSRB-MB

Communication			MODBUS RTU communication	
Built-in logging	Logging mode		Automatic overwrite update	
	Logging data type	Measuring data *1	Measuring data and time data are logged at the interval set at the data logging period. (15 min, 30 min, 60 min)	
		Alarm log	Time data at alarm generating/cancellation and at waiting for alarm cancellation	
		The recorded time of the Max/Min value	Max/Min value data and time data	
	Number of logging items	Measuring data	Integrated value data: 5 items, Data other than integrated value: 15 items, Total: A maximum of 20 items	
		Alarm log	The number of the set alarms	
		The recorded time of the Max/Min value	The total is 19 items: Current Max/Min (AVG), Line voltage Max/Min (AVG), Phase voltage Max/Min (AVG), Total active power Max/Min (AVG), Total power factor Max/Min (AVG), Frequency Max/Min (AVG), Total reactive power Max/Min, Total apparent power Max/Min, Total harmonic current RMS Max value, Harmonic line voltage distortion ratio Max total, Harmonic phase voltage distortion ratio Max total	
	Internal memory logging period	Measuring data	30 days (Logging period: 15 minutes), 60 days (Logging period: 30 minutes), 120 days (Logging period: 60 minutes),	
		Alarm log	100 records	
		The recorded time of the Max/Min value	1 record for every Max/Min value factor	
	System log data		100 records	
	Saving logging data		Use of nonvolatile memory	
	How to acquire logging data		Acquire the logging data via MODBUS® RTU Communication	
	Clock accuracy		1 minute difference/Month (typical)	
Connectable Optional Plug-in Module			ME-4210-SS96B, ME-0040C-SS96, ME-0052-SS96, ME-0000MT-SS96, ME-0000BU-SS96	
Analog output		Output specifications (Load)	4 mA to 20 mA DC (0 to 600 Ω)	
Pulse/Alarm output		Switch type	Semiconductor relay/No-voltage a-contact	
		Contact capacity	35 V DC, 0.1 A	
		Pulse width	0.125 s, 0.5 s, 1.0 s	
Contact input (DI)		Contact capacity	24 V DC (19 V to 30 V DC), 7 mA or less	
		Signal width	30 ms or more	
Contact output (DO)		Switch type	Semiconductor relay/No-voltage a-contact	
Power interruption backup			Use of nonvolatile memory (Items: settings, MAX/MIN value, active energy, reactive energy, apparent energy, periodic active energy, rolling demand, operating time)	
		Built-in logging	Use of nonvolatile memory (Logging data, System log data)	
VA Consumption		Voltage circuit	Each phase: 0.1 VA (at 110 V AC), 0.2 VA (at 220 V AC), 0.4 VA (at 440 V AC)	
		Current circuit	Each phase: 0.1 VA	
		Auxiliary power circuit	13 VA (at 110 V AC), 14 VA (at 220 V AC), 9 W (at 100 V DC)	
Auxiliary power			100 V to 240 V AC (±15%), 100 V to 240 V DC (-30% +15%)	
Weight			0.5 kg	
Dimensions			96 (H) × 96 (W) × 90 (D) mm	
Mounting method			Embedded	
Operating temperature/humidity			-5°C to +55°C (Daily average temperature: 35°C or less), 0% to 85% RH, Non condensing	
Storage temperature/ humidity			-25°C to +75°C (Daily average temperature: 35°C or less), 0% to 85% RH, Non condensing	

Note 1. The class value represents the ratio to the rated value (100%).
Note 2. For measurement where the harmonic distortion ratio (content rate) is 100% or more, the class can exceed ±1.0%.
Note 3. Harmonic current cannot be measured without voltage input.
Note 4. Using the conventional ME-4210-SS96 (Optional Plug-in Module), the CE marking and UL standards safety certification requirements cannot be met.
*1: Integrated values (Wh, varh, and VAh) are measured values of ME96SS. They are not differential values by logging period.

Specifications

■ME96SSEB-MB

Model name		ME96SSEB-MB	
Phase wire system		3-phase 4-wire, 3-phase 3-wire (3CT, 2CT), 1-phase 3-wire, 1-phase 2-wire (common use)	
Rating	Current	5 A AC, 1 A AC (common use)	
	Voltage	3-phase 4-wire: max 277/480 V AC 3-phase 3-wire: (DELTA) max 220 V AC, (STAR) max 440 V AC 1-phase 3-wire: max 220/440 V AC 1-phase 2-wire: (DELTA) max 220 V, (STAR) max AC 440 V AC	
	Frequency	50/60 Hz (common use)	
Item		Measuring Item	Class
Measuring element	Current (A)	A1, A2, A3, AN, A$_{AVG}$	±0.5%
	Current demand (DA)	DA1, DA2, DA3, DAN, DA$_{AVG}$	
	Voltage (V)	V12, V23, V31, V$_{AVG}$ (L-L), V1N, V2N, V3N, V$_{AVG}$ (L-N)	
	Active power (W)	W1, W2, W3, ΣW	
	Reactive power (var)	var1, var2, var3, Σvar	
	Apparent power (VA)	VA1, VA2, VA3, ΣVA	
	Power factor (PF)	PF1, PF2, PF3, ΣPF	±0.5%
	Frequency (Hz)	Hz	±0.2%
	Active energy (Wh)	Imported, Exported	Class 0.5S (IEC62053-22)
	Reactive energy (varh)	Imported lag, Imported lead, Exported lag, Exported lead	Class 1S (IEC62053-24)
	Apparent energy (VAh)	Imported + Exported	±2.0%
	Harmonic current (HI)	Total	±2.0%
	Harmonic voltage (HV)	Total	
	Operating time (h)	Operating time 1, Operating time 2	(Reference)
Measuring method	Instantaneous value	A, V: RMS value calculation; W, var, VA, Wh, varh, VAh: Digital multiplication; PF: Power ratio calculation; Hz: Zero-cross; HI, HV: FFT	
	Demand value	DA: Thermal type calculation	
Display	Display type	LCD with LED backlight	
		First to Third line display: 4 digits, Fourth line display: 6 digits	
	The number of display digits or The number of segments	Digital section	A, DA, V, W, var, VA, PF: 4 digits; Hz: 3 digits; Wh, varh, VAh: 9 digits (6-digit or 12-digit is also available.); Harmonic distortion ratio/content rate: 4 digits; Harmonic RMS value: 4 digits; Operating time: 6 digits
	Display update time interval	0.5 s, 1 s (selectable)	
Communication		MODBUS RTU communication	
Connectable Optional Plug-in Module		Cannot connect optional module	
Power interruption backup		Use of nonvolatile memory (Items: settings, MAX/MIN value, active energy, reactive energy, apparent energy, operating time)	
VA consumption	Voltage circuit	Each phase: 0.1 VA (at 110 V AC), 0.2 VA (at 220 V AC), 0.4 VA (at 440 V AC)	
	Current circuit	Each phase: 0.1 VA	
	Auxiliary power circuit	4 VA (at 110 V AC), 5 VA (at 220 V AC), 3 W (at 100 V DC)	
Auxiliary power		100 V to 240 V AC (±15%), 100 V to 240 V DC (-30% +15%)	
Weight		0.3 kg	
Dimensions		96 (H) × 96 (W) × 36 (D) mm	
Mounting method		Embedded	
Operating temperature/humidity		-5°C to +55°C (Daily average temperature: 35°C or less), 0% to 85% RH, Non condensing	
Storage temperature/ humidity		-25°C to +75°C (Daily average temperature: 35°C or less), 0% to 85% RH, Non condensing	

Note 1. The class value is a percentage of rated value (100%).
Note 2. For harmonics measurement where distortion ratio (content rate) is 100% or more, it can exceed ±2.0%.
Note 3. When there is no voltage input, harmonic current cannot be measured.

■Standards Compliance

Electromagnetic Compatibility			
	Emissions		
		Radiated Emission	EN 61326-1 / EN 55011, CISPR 11 FCC Part15 Subpart B Class A
		Conducted Emission	EN 61326-1 / EN 55011, CISPR 11 FCC Part15 Subpart B Class A
		Harmonics Measurement	EN 61000-3-2
		Flicker Meter Measurement	EN 61000-3-3
	Immunity		
		Electrostatic discharge Immunity	EN 61326-1, EN IEC 61000-6-2 / EN 61000-4-2
		Radio Frequency Electromagnetic field Immunity	EN 61326-1, EN IEC 61000-6-2 / EN 61000-4-3
		Electrical Fast Transient/Burst Immunity	EN 61326-1, EN IEC 61000-6-2 / EN 61000-4-4
		Surge Immunity	EN 61326-1, EN IEC 61000-6-2 / EN 61000-4-5
		Conducted Disturbances, Induced By Radio Frequency Fields Immunity	EN 61326-1, EN IEC 61000-6-2 / EN 61000-4-6
		Power Frequency Magnetic Field Immunity	EN 61326-1, EN IEC 61000-6-2 / EN 61000-4-8
		Voltage Dips and Short Interruptions	EN 61326-1, EN IEC 61000-6-2 / EN 61000-4-11

Safety		
	Europe	CE, as per EN61010-1: 2010 (3rd Edition)
	U.S. and Canada	UL Recognized Component as per UL 61010-1, IEC 61010-1
	Installation Category	III
	Measuring Category	III
	Pollution Degree	2

■MODBUS RTU Communication Specifications

Item	Specification
Interface	RS-485 2-wire half-duplex transmission
Protocol	RTU (binary data transfer)
Transmission method	Asynchronous
Connection type	Multi-point bus
Baud rate	2400, 4800, 9600, 19200, 38400bps
Data bit	8
Stop bit	1, 2
Parity	ODD, EVEN, NONE
Address	1 to 255 (0: for broadcast mode)
Distance	1,200m (max)
Max. connectable units	31 units
Terminal Resistance	120Ω 1/2W
Recommended Cable	Shielded twisted-pair AWG24 to 14

■ For more information on data, please refer to the following document.
  · Electronic Multi-Measuring Instrument ME series MODBUS Interface specifications…LSPM-0075

■CC-Link Communication Specifications for optional plug-in module

Item	Specification
No. of occupied stations	1 Station Remote device station
CC-Link version	CC-Link Ver 1.10 / Ver 2.00
Baud rate	10Mbps / 5Mbps / 2.5Mbps / 625kbps / 156kbps
Transmission method	Broadcast polling system
Synchronous method	Frame synchronous system
Encoding method	NRZI
Transmission path format	Bus format (EIA RS485)
Transmission format	HDLC
Error control system	CRC ($X^{16} + X^{12} + X^5 + 1$)
Number of connectable units	42 units (max, remote device station)
Remote station numbers (station numbers)	1 to 64

■ For CC-Link connection cables, please use the dedicated cables.
For information regarding dedicated cables, please refer to the CC-Link Partner Product Catalog published by the CC-Link Partner Association or CC-Link Partner Product Information on the CC-Link Partner Association website (http://www.cc-link.org).
  Notes 1. Dedicated CC-Link cables compatible with Ver. 1.00 cannot be used in tandem with dedicated CC-Link high-performance cables compatible with Ver. 1.00.
  Notes 2. In the case of systems consisting of units compatible with Ver. 1.00, 1.10 or 2.00 used in tandem with Ver. 1.00 or 1.10 cables, Ver. 1.00 specifications will apply for the maximum total cable length and length of cables between stations.
  Notes 3. For terminal resistance, be sure to use 110 Ω ±5% (1/2W product) when using dedicated CC-Link cables or 130 Ω ±5% (1/2W product) when using dedicated CC-Link high-performance cables.
■ For more information on data, please refer to the following document.
  · Electronic Multi-Measuring Instrument programming manual (CC-Link)…………………………………………LEN080334
  · Electronic Multi-Measuring Instrument programming manual (CC-Link)(For ver. 2 remote device station)…LEN130391

■Input/Output Specifications

Item	Specification	Optional Plug-in Module type
Analog output	4-20mA (0-600 Ω)	ME-4210-SS96B
Pulse/Alarm output	No-voltage "a" contact Capacity: 35VDC, 0.1A	ME-4210-SS96B
Digital input	19-30VDC 7mA or less	ME-4210-SS96B, ME-0040C-SS96, ME-0052-SS96
Digital output	No-voltage a contact Capacity: 35VDC, 0.2A	ME-0052-SS96

Specifications

■MODBUS TCP Communication Specifications for optional plug-in module

Item		Specification
Interface		1 port (10BASE-T/100BASE-TX)
Transmission method		Base band
Number of stages connected in cascade		Max. 4 stages (10BASE-T), max. 2 stages (100BASE-TX) (when repeater hub is used)
Max. distance between nodes		200m
Max. segment length		100m
Connector applicable to external wiring		RJ45
Cable	10BASE-T	Cable meeting IEEE802.3 10BASE-T standard (Unshielded twisted pair cable (UTP cable), category 3 or higher)
	100BASE-TX	Cable meeting IEEE802.3 100BASE-TX standard (Shielded twisted pair cable (STP cable), category 5 or higher)
Protocol		MODBUS TCP (port No.502)
Max. number of connections		4
Support functions		Auto-negotiation function (automatic recognition of 10BASE-T/100BASE-TX) Auto-MDIX function (automatic recognition of straight cable/cross cable)

■ For more information on data, please refer to the following document.
　Electronic Multi-Measuring Instrument ME series MODBUS Interface specifications…LSPM-0075

■Logging Specifications for optional plug-in module

Item		Specification
Logging mode		Automatic updating by overwriting (not provided with a function to automatically start according to the start time setting)
Kinds of logging data	Detailed data	Measurement data is stored at the specified "detailed data logging interval" (1 min, 5 min, 10 min, 15 min or 30 min). Note: The data will be output as a detailed data file. Note: As the integrated values, not the difference values, but the values displayed on the multi indicating instrument will be output.
	1-hour data	Measurement data is stored at a one-hour interval. Note: The data will be output as a one-hour data file or a one-day data file. Note: As the integrated values, not the difference values, but the values displayed on the multi indicating instrument will be output.
Number of logging elements	Detailed data	Max. 6 elements
	1-hour data	Max. 6 elements
Internal memory logging period	Detailed data	Detailed data logging interval: 1 min for 2 days Detailed data logging interval: 5 min for 10 days Detailed data logging interval: 10 min for 20 days Detailed data logging interval: 15 min for 30 days Detailed data logging interval: 30 min for 60 days
	1-hour data	400 days (about 13 months)
SD memory card (2GB) logging period		10 years or more
System log data		1200 records
Logging data / system log data output format		CSV format (ASCII code)
Power failure compensation		Backup by built-in lithium battery Total power interruption backup time: 5 years (at daily average temperature of 35°C or less) (The life of the lithium battery is 10 years (at a daily average temperature of 35°C or less).) The battery cannot be replaced by the customer. Please consider updating the module.
	Set values { logging ID, logging elements and detailed data logging interval	Stored in FRAM (non-volatile memory) Note: The data will not be deleted even if power interruption is caused by battery voltage drop (BAT. LED is on).
	Logging data and system log data	Stored in SRAM (volatile memory) Note: The data will be deleted if power interruption is caused by battery voltage drop (BAT. LED is on).
	Clock operation	Note: The clock operation will stop if power interruption is caused by battery voltage drop (BAT. LED is on). After power restoration, the clock operation will start from 00:00 on Jan. 1, 2016.
Clock accuracy		1 min / month
Output data storage medium		SD memory card (SD or SDHC)
Optional accessory		SD memory card (EMU4-SD2GB) [1]

*1: Use the SD memory card (EMU4-SD2GB) made by Mitsubishi Electric.
　Use of any memory card other than our product (EMU4-SD2GB) is not covered by the warranty.

■ For more information on data, please refer to the following document.
　Logging specifications…LSPM-0092

Operating Instructions

■Functions

●LCD Functions

No.	Name of each part	Function
1	LEAD status	Light up when leading reactive energy is measured
2	LAG status	Light up when lagging reactive energy is measured
3	Built-in logging status	Light up when the built-in logging function is operating
4	Digital element display	Display measuring elements expressed in digital numbers
5	Digital display	Display measured values in digital numbers
6	Unit	Display the units of measured values
7	Setup status	Light up in the setting mode / Blink in the setting confirmation mode
8	Test mode status	Light up in the test mode
9	Clock status	Light up when the date and time are set
10	Upper/lower limit alarm status	Blink when the upper/lower limit alarm is generating

	Specification	ON	Blink	OFF
11 Communication/ Option logging status	CC-Link communication	Normal	CC-Link version mismatches, Hardware abnormality	Hardware abnormality
	MODBUS RTU communication MODBUS TCP communication	Normal	Communication error such as wrong address [1]	Hardware abnormality
	Logging function	Normal	Error occurrence such as setting abnormality, SD memory card error, or battery voltage drop [1]	Hardware abnormality

*1. For details, refer to User's Manual.

No.	Name of each part	Function
12	Harmonics	Light up when harmonic is displayed
13	Metering status	Blink when Imported active energy is measured [Note 1] / *It appears on the imported active energy display screen only

Note 1. The blinking cycle is constant regardless of measuring input size.

●Button Functions

Basic performance		Special performance	
Button operation	Functions	Button operation	Functions
SET	Used to set items such as primary voltage and current, and to choose setting items	DISPLAY — Push for 2 seconds	Used to switch display between manual display change ⇔ cyclic display change
		PHASE — Push for 2 seconds	Used to switch display between manual phase change ⇔ cyclic phase change
+ or −	Used to switch display between setting	+ + − — Push for 2 seconds	Used to change Wh, etc. to another unit and to low order zoom display
MAX/MIN	Used to switch display between max/min values and instantaneous value	+ + RESET — Push for 2 seconds	Used to perform batch reset of all the max/min values
PHASE	Used to change over phase	+ or − — Push for 1 seconds	Used to perform fast-forward or fast-return of numerical values in numerical value setting
DISPLAY	Used to change over the display screen	SET + RESET + PHASE	Used to reset Wh, varh, and VAh to zero by concurrently pushing for 2 seconds

Note. An example. For details, refer to the user's manual.

■Set-up

For correct measurement, it is necessary to set the primary voltage/current in the set-up mode.

Enter the setting mode from the operating mode and set the necessary items. Any items not set remain in the factory default.

●Set-up workflow (Example for ME96SSHB-MB)

Symbol	Operation (function) details	Button operation	
⇨ (gray)	Access set-up mode from operating mode	SET + RESET	Simultaneously press for 2s
➡ (black)	Access setting value confirmation mode from operating mode	SET	Press for 2s
• • ◆	Save settings and return to operating mode	SET	
◄─	Select set-up menu	+ or −	
⇨	Move to next screen	SET	
⇨	Return to previous setting item	DISPLAY	
----►	Skip remaining settings	SET	Press for 1s
◄--►	Select cancel	+ or −	

Notes 1. Basic measurements are possible by adjusting settings in the menu 1 (area enclosed by dotted line).
Notes 2. Item settings vary depending on the model.
Notes 3. Setting confirmation menu 9 (test mode) is not displayed in the setting mode.

14

●Basic Set-up Operations

To access the setting mode, press and hold the (SET) and (RESET) buttons down at the same time for 2s. Press the (SET) button to display the items to be set, and the (+) and (−) buttons, set the details. To save setting for each setting menu, press the (SET) button when the End screen is displayed.

The underlined setting parameters are the initial value.

Set-up menu 1: Basic settings (set phase wire system, display pattern, Using VT/direct input, CT primary current, etc.)

Set-up menu — Adjust the set-up menu No. to "1".

①Set the phase/wire system according to the number of measurement circuits targeted.

DISPLAY SET

The setting procedure is the same as that of ②Analog output CH1 detailed settings.
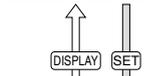

⑥Set the upper limit for analog output (same for all channels).

Setting	Explanation
oFF (no limit)	Output to +5% of upper limit and -5% of lower limit (with respect to span value)
on (limit)	Output to +1% of upper limit and -1% of lower limit (with respect to span value)

Note: Skip this setting when the analog output of all channel output items is set to "non."

⑥

Select another set-up menu or end set-up.

■To continue to set-up
Select the menu
No. using the ⊕ or ⊖ button.

■To finish set-up
Press the ⊕ or ⊖ button to display the End screen, then press the SET button to save settings.

Operating Instructions

Set-up menu 6: Logging setting (only when ME-0000BU-SS96 is installed)
＊Only for ME96SSHB-MB or ME96SSRB-MB, it is applicable.

Set-up menu ── Adjust the set-up menu No. to "6".

①Optional selection ── ①Select "optional logging" or "built-in logging"

PLUG ◄──────────► buiLt
(Optional logging)   (Built-in logging)

The explanation here is about optional logging setting.

②Logging ID ── ②Set the ID number of the optional logging unit.

Allowable IDs : 001 ～ 255

When an ID number has been set for the installed optional logging unit, the value is displayed as the default.

Notes: If the SD memory card contains data with the same logging ID, the data may be overwritten.
    When the data of more than one optional logging unit are collected in one SD memory card, set the logging ID without fail.

③Logging data clear ── ③Clear the data stored in the optional logging unit.

no ◄──────────► yES
(Not clear)   (Clear)

④Logging element pattern ── ④Set the logging element pattern to select the data to be logged.
If the logging data is not cleared, the logging element pattern cannot be set.

Allowable patterns : LP01 ◄►LP02 ◄►LP00

When the pattern is set to LP00, any logging elements can be selected.
For the details of LP00 setting, see the instruction manual.
The logging element patterns of LP01 and LP02 are defined as shown below.
Detailed data is recorded at a shorter interval than that of 1-hour data.
The detailed data logging interval can be set in ⑤"Detailed data logging interval."

Phase wire system setting: For 3-phase 4-wire

Logging element pattern	LP01		LP02	
	Detailed data	1-hour data	Detailed data	1-hour data
Data 1	Wh imported	Wh imported	Wh imported	Wh imported
Data 2	varh imported (lag)	Wh exported	A_{AVG}	Wh exported
Data 3	VAh	varh imported (lag)	V_{AVG} (L-L)	varh imported (lag)
Data 4	DW (present value)	varh imported (lead)	W_Σ	varh imported (lead)
Data 5	Dvar (present value)	VAh	PF_Σ	VAh
Data 6	DVA (present value)	None	Hz	None

⑤Detailed data logging interval ── ⑤Set the interval of logging the detailed data in the logging element pattern LP01 or LP02.
If the logging data is not cleared, the detailed data logging interval cannot be changed.

1min ◄► 5min ◄► 10min ◄► 15min ◄► 30min

Set-up menu ── Select another set-up menu or end set-up.
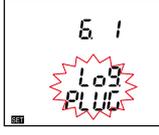

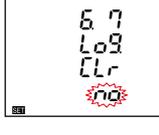

■To continue to set-up
Select the menu No. using the ⊕ or ⊖ button.

■To finish set-up
Press the ⊕ or ⊖ button to display the End screen, then press the (SET) button to save settings.

■Operation (for ME96SSHB-MB)

●Display Change

Press (DISPLAY), the measurement display switches over.
When the (DISPLAY) and ⊖ buttons are held down for
2 seconds or more, the display will change in reverse order.

Example of display switching (Phase wiring system: 3P4W, Display pattern: P01, No additional screen)

<1st screen of 6 screens>
1st line: Current
2nd line: Voltage
3rd line: Active power

4th line: Active energy (imported)

1st line: Current Phase 1
2nd line: Voltage Phase 12
3rd line: Active power Phase 1
4th line: Active energy (imported)

1st line: Current average value
2nd line: Voltage average value (L-L)
3rd line: Active power (total)
4th line: Active energy (imported)

●Maximum/Minimum Display Values

Press the (MAX/MIN) button to change to the maximum and minimum values
of the display screen. Press it again to return to the current value display screen.

●Reset Maximum/Minimum Values

Press the (RESET) button for 2s to reset the maximum/minimum values of
the measurement items displayed. The maximum/minimum values will
become the current values.
Press the (RESET) and ⊕ buttons simultaneously for 2s to reset all
maximum/minimum values. The maximum/minimum values will become the current values.

Example of display switching between the current value display screen and MAX/MIN value display screen

Current value display screen

MAX/MIN value display screen
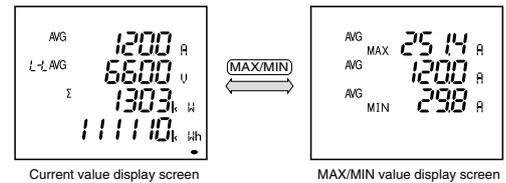

●Displaying Active energy/Reactive energy/Apparent energy

Active energy (Imported)

Active energy (Exported)*

Apparent energy

* To display these screens, it is necessary to change the settings for active/reactive energy measurement method in menu 3.1.

Reactive energy (Imported,lag)

Reactive energy (Imported,lead)*

Reactive energy (Exported,lag)*

Reactive energy (Exported,lead)*
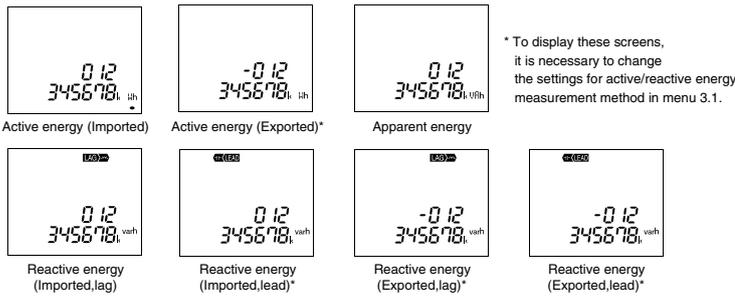

Change the unit (M, k, none) or increase the digits in the bottom display for power used/reactive power used/apparent power used/time-based power used to check the lower/higher-order digits. Push the ⊕ and ⊖ buttons simultaneously for 2s to switch between screens.

Active energy (imported): Example of switching   012, 345, 678, 901, 234, 567Wh

⊕ and ⊖
Push concurrently for 2 seconds.

Unit: M

Low order zooming

Unit: None

Unit: k
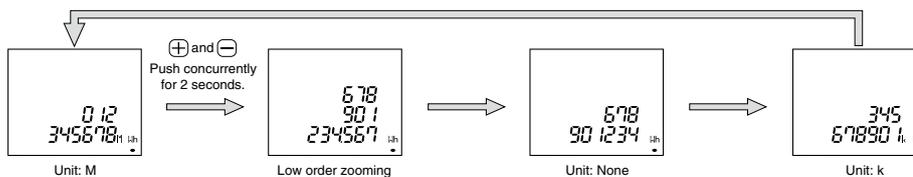

●Reset Active energy/Reactive energy/Apparent energy

Press the (SET), (RESET) and (PHASE) buttons simultaneously for 2s to reset all of the following together:
active energy/reactive energy/apparent energy (this operation only works on the current value display screen).

● Changing Upper/Lower Limits for Alarm Activation and Cancellation

When measurement values exceed the upper/lower limit values that have been set, an alarm activates and the screen begins to blink.

● During Alarm Generation

Alarm condition: When a measured value exceeds the alarm value setting, the screen begins to flash and the alarm contact closes.
Alarm cancelled: When the alarm is cancelled, the screen stops flashing and the alarm contact opens.

Alarm reset method		Measurement value ≥ Upper limit alarm value (or ≤ Lower limit alarm value)	Measurement value < Upper limit alarm value (or > Lower limit alarm value)	
Automatic (Auto)	Screen	ALARM HI or LO will flash	Constantly on	
	Alarm contact	Closed	Open	
Manual (Hold)	Screen	ALARM HI or LO will flash (Alarm activated)	ALARM HI or LO will flash (Alarm on hold) RESET →	Constantly on (Alarm cancelled)
	Alarm contact	Closed	Closed	Open
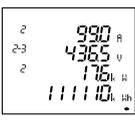

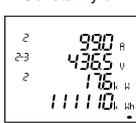

If the item that caused the alarm is displayed on the screen, the digital value, unit (A, V, W, var, PF, HZ, %, DM, THD) and phase (1, 2, 3, N) will be displayed as shown in the table below. If the item is not displayed on the screen, the screen will not flash.

Alarm status	Digital value	Unit	Phase
Alarm activated	Flashing*	Flashing	Flashing*
Alarm on hold	On	Flashing	Flashing*
Alarm cancelled	On	On	On

* Only flashes if the phase that caused the alarm is being displayed.

● Alarm Cancel

The alarm can be reset automatically or manually. The alarm recovery method varies according to the reset method setting.

Alarm reset method	Cancellation method
Automatic (Auto)	The alarm resets automatically when the measurement value returns to within the upper/lower limit set value.
Manual (Hold)	The alarm setting changes to "on hold" even after the measurement value becomes returns to within the upper/lower limit value setting. Once the value returns to within the upper/lower limit value set, perform the following alarm recovery operations. (Note: Alarm recovery operations cannot be carried out from the maximum/minimum value display screen or contact input screen.) <To select item and cancel alarm> When the item that caused the alarm is displayed, press the (RESET) button to deactivate the alarm. (For items with phases such as current and voltage, it is necessary to press the (RESET) button for each phase to cancel the alarm.) <To cancel alarms for all items> To cancel alarms for all items at once (batch), press the (RESET) button for 2s when in operating mode.

● Alarm delay Time

If an alarm delay time has been set, alarm notification begins only when the measurement value exceeds the upper/lower limit alarm value for a period longer than the alarm delay time.

● Harmonic Display

The harmonic effective value, distortion ratio and content ratio can be displayed. To do so, first set the harmonic display (set-up menu: 3.2).

<Harmonic current "total" Display example>

<Harmonic voltage "5th degree" Display example>
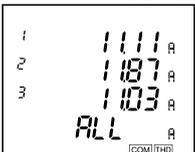

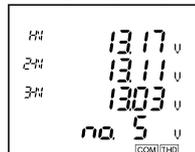

1st line: Side 1 RMS value
2nd line: Side 2 RMS value
3rd line: Side 3 RMS value
4th line: Degree number

<Harmonic current "total" (distortion rate) Display example >

1st line: Side 1 distortion ratio (content rate)
2nd line: Side 2 distortion ratio (content rate)
3rd line: Side 3 distortion ratio (content rate)
4th line: Degree number

● Changing the Harmonic Degree Display

Press the ⊕ or ⊖ button to change the harmonic degree.

Degree	Harmonic current		N-phase harmonic current		Harmonic voltage	
	RMS	Distortion (content) ratio	RMS	Distortion (content) ratio	RMS	Distortion (content) ratio
Harmonic total	○	○	○	—	○	○
1st (fundamental)	○	—	○	—	○	—
3rd, 5th, 7th, 9th, 11th, 13th, 15th, 17th, 19th, 21st, 23rd, 25th, 27th, 29th and 31st	○	○	○	—	○	○
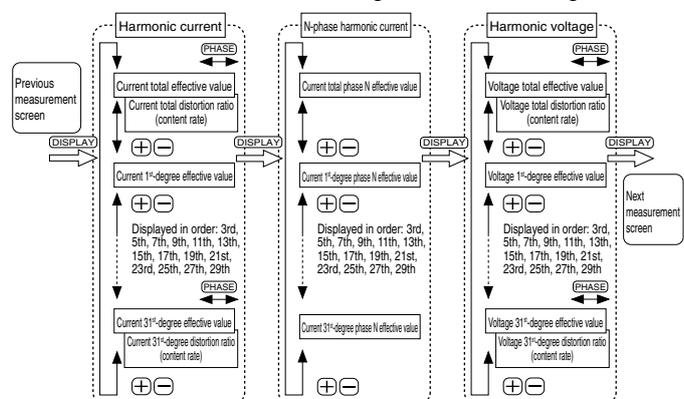

■Display Pattern Contents

The items set in display patterns and additional settings will be displayed as explained in the following table.

●ME96SSHB-MB/ME96SSRB-MB Screen Display (3-phase 4-wire)

Display pattern		No.1	No.2	No.3	No.4	No.5	No.6	No.7	No.8	No.9	No.10
					Screen set based on display pattern

60° 60°
(side view) (overhead view)
3 Attachment

For attachment of the basic device into the panel hole, attach according to the following procedure.

①The attachment lug is installed in two holes of the top and bottom of the basic device.

②Tighten the screws of the lug, and fix onto the panel.
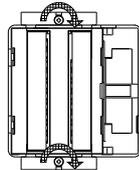

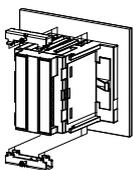

| Note | To prevent damage to the panel and screws, do not overtighten the screws. The recommended torque for this product is 0.3 N·m to 0.5 N·m (about half the normal torque). Tighten the two screws evenly. |

Main unit mounting screws: M3

4 Installing Optional Plug-in Module

When installing the optional plug-in module onto the basic device, install according to the following procedure.

①Remove the optional cover.

②Attach the optional unit to the main unit.
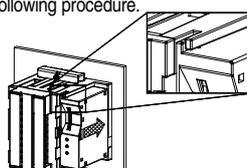

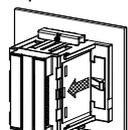

Fit the protruding part of the optional unit into the slot in the main unit.

Wiring

1 Applicable Cable Size

The table on the right describes the applicable wire size.

Part	Screw type	Wire specifications		Tightening torque
Product main body (auxiliary power supply, voltage input, current input and MODBUS RTU communication terminals)	M3	• Use of crimp-style terminals: AWG26 to 14 (2 wires can be connected.) Applicable crimp-style terminal: OD of 6 mm or less, for screw M3	OD ⊕	0.6 to 0.8 N·m
Optional unit terminal (ME-0052-SS96, ME-0040C-SS96, ME-4210-SS96B)	Screwless	• Single wire and stranded wire: AWG24 to 14 (Rod terminal can be used together with stranded wire.) Wire stripping length: 10 to 11 mm *1: To conform to UL Standard, use in accordance with the following requirements. • Single wire and stranded wire: AWG24 to 18 •Use of a bar terminal is not allowed. *2: When using a bar terminal for inserting two wires, select a terminal whose insertion part into the terminal block is 12 to 13 mm long.		—
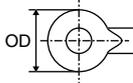

2 Wiring

■Optional Plug-in Module Terminal

①Remove the wire casing at the end of the wire and solder to the rod terminal.

②With the lever pushed in, insert the wire and then release the lever to connect.
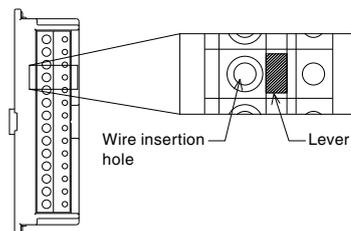

3 Confirmations

After wiring, make sure the following:

☐ All wiring is connected

☐ There is no misitake in wiring

■Optional Plug-in Module Terminal

Wire insertion hole — Lever

Note	Protective sheet
	There is a protective sheet covering the LCD screen to prevent scratching during panel installation. Please remove the sheet before using the meter. When removing the sheet, the LCD may turn on due to the static electricity generated. This is not abnormal; the LCD will turn off after a short time.
	Installation position
	If installing the unit at the panel edge, choose an installation position where there is sufficient space for wiring work.
	Optional unit
	Turn the auxiliary power supply off before attaching the optional unit. If attached with the power on, the main unit will not recognize the optional unit. To remedy this, turn off/restart the auxiliary power supply or execute the "instrument restart" operation.

Note

1. The voltage input terminal will vary depending on if it is a 3-phase, 3-wire system or otherwise.
2. VT/CT polarity errors will cause incorrect measurement.
3. Always use the grounding terminal (⏚) in a grounded state. Perform grounding with a grounding resistance of 100Ω or less. Insufficient grounding may cause erroneous operation.
4. Use shielded twisted-pair cables for transmission signal lines.
5. Install 120Ω terminating resistors between terminals "T/R+" and "T/R-" for devices at both ends of MODBUS RTU communication line.
6. Use the thickest possible grounding wire to ensure low impedance.
7. MODBUS RTU transmission signal cables must not be in close proximity or bundled with high-voltage cables.

Protective Earthing
Wiring Diagrams (Continued)

Note	1. Pulse output, alarm output, and contact input/output cables must not be in close proximity or bundled with power cables or high-voltage cables. When laid parallel, separate by the distance shown in the following table.

Condition	Distance
Power lines of 600V or less	300mm or more
Other power lines	600mm or more

2. Analog output cables must not be in close proximity or bundled with other power cables or input cables (e.g., VT, CT, auxiliary power supply). In addition, to prevent noise, surge and induction, use shielded cables or twisted-pair cables. Make sure that cables are as short as possible.
3. There is no insulation between the MODBUS RTU communication portion and the optional module ME-4210-SS96B, ME-0040C-SS96 or ME-0000MT-SS96.
4. Use only designated cables when connecting the CC-Link (see communication specifications). CC-Link dedicated cables cannot be used at the same time as CC-Link dedicated high-performance cables. Normal data transmission cannot be guaranteed if used at the same time.
The terminal resistance value varies depending on the type of dedicated cable.
5. For cables connecting the CC-Link, connect shielded cables to "SLD" and ground "FG" cables. "SLD" and "FG" cables are connected inside the unit.
6. CC-Link transmission lines are small signal circuits: separate from strong electrical circuits by a distance of 10cm or more, or 30cm or more if laid in parallel over a long distance.
Ground the terminal before use.
7. For CC-Link transmission, always use dedicated lines and comply with conditions for total wiring distance, distance between stations and terminal resistance values according to the communication speed. Not doing so may prevent normal communication (see the CC-Link Master Unit Operations Manual for information on dedicated lines and wiring conditions).
8. The terminal resistance supplied with the CC-Link Master Unit must always be used for the units at both ends of the CC-Link transmission line. If the meter is at the end of the CC-Link transmission line, connect it between the DA and DB terminals.
9. Communication errors may occur under the influence of high-frequency noise from other devices in the installation environment during high-speed communication (100 Mbps) via 100BASE-TX connection of MODBUS TCP.
Measures to be taken when the network system is configured to avoid the influence of high-frequency noise are shown below.
(1) Wiring connection
• When laying a twisted pair cable, do not bundle the cable together with any main circuit line or power line or lay it close to such a line.
• Keep the twisted pair cables in the duct.
(2) Communication method
• Increase the number of communication retries as needed.
• Replace the hub to be used for connection with that for 10 Mbps, and communicate at a data transmission speed of 10 Mbps.
10. Do not connect any terminal or RJ45 connector in the live state.
11. Do not insert or remove the SD memory card in the live state.

Rated voltage for each phase/wire system

Phase/Wire	Connection	Rated voltage	Figure
Three phase 4-wire	Star	Max. 277VAC (L-N)/480VAC(L-L)	Figure 1
Three phase 3-wire	Delta	Max. 220VAC (L-L)	Figure 2
	Star	Max. 440VAC (L-L)	Figure 3
Single phase 3-wire	–	Max. 220VAC (L-N)/440VAC(L-L)	Figure 4
Single phase 2-wire*	Delta	Max. 220VAC (L-L)	Figure 5
	Star	Max. 440VAC (L-L)	Figure 6

* The circuit derived from the three-phase 3-wire delta connection and the single-phase 2-wire transformer circuit have the maximum rating of 220 VAC.
  The circuits derived from the three-phase 4-wire and three-phase 3-wire star connections and single-phase 3-wire connection have the maximum rating of 440 VAC.

■EcoWebServerIII

Mitsubishi Electric Energy-saving Data Collection Server
From visualization to publication of energy data

Simple Set-up

When using the set-up software supplied, power management meters connected to CC-Link and measurement data can be set by mouse and keyboard operations.

Display Measurement Data as Graphs on a Web Browser

The main unit has a built-in web server that allows anyone, anywhere to understand the amount of energy being used in real time via computer without requiring additional software, thereby supporting early detection of energy waste.

Automatic Transmission of Data Collected, Mail Notifications and Contact Output

Users are notified of changes in energy, facilities, etc. via e-mail and alarms. Energy management targets and status monitoring of entire factories and buildings help ensure that problems onsite are detected without fail.

◇PLC data can also be sent to EcoWebServerIII by Ethernet.
◇Data of various sites can be browsed in the head office by utilizing the internal network.

Collection, storage, visualization, publication on the web, analysis and monitoring
All can be realized by one server.

LAN(Ethernet)

EcoWebServerIII
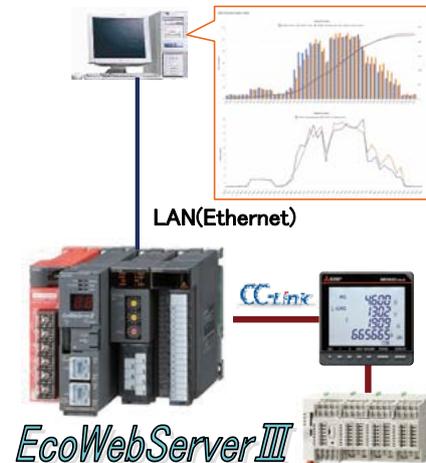

■EcoMonitorPlus

Energy measuring units helpful in adding units for increased number of measuring circuits and preventive maintenance by simultaneous measurement of electric power and leakage

Phased expansion of energy-saving system

At first, energy-saving measurement can be started on a small scale from a desired place.
The system can be configured by adding units according to the increase of measuring circuits.

Leakage current monitoring

Lineup of basic units for monitoring insulation
Helpful in early detection of equipment problems through accurate leakage current trend monitoring by Ior method
* Ior: Leakage current caused by insulation deterioration (leakage current of resistive component)

Simple management of measurement data with prepared forms and graphs

Data can be collected by the logging unit (SD memory card) without the host application on the PC, etc.
Forms and graphs can be easily prepared by using the spreadsheet software (logging unit utility*).
* The logging unit utility can be downloaded for free from Mitsubishi Electric FA site.

Energy Measuring Unit
EcoMonitorPlus

■EcoMonitorLight

Energy measuring unit with integrated display for easily realizing the visualization of energy

A three-model line-up: a Three phase 3-wire system designed for users wanting simple power measurements at low cost; and a Three phase 4-wire system designed for users looking for basic power measurements plus something extra (harmonic measurements, alarm monitoring, etc.).

Simple Measurements

The built-in LCD enables easy setting, measurement and display of power used for energy management.

MODBUS RTU (RS-485) Communication as Standard Equipment

Meters come with MODBUS RTU communication as standard equipment, allowing the device to be used as a PLC system, other high-order system, display device (GOT), etc.

Logging/Communication Units for Expanded Measurement Applications

The product line-up also includes logging units/communication units (CC-Link communication unit) that can be incorporated as add-on options, enabling installations that best match to the customer's usage environment.

■Logging unit: Data measured by the main unit (current, voltage, power, etc.) can be output to an SD memory card in CSV file format, realizing simple data management.

Highly Accurate Measurements and Support Functions

Customer activities are supported through functions such as 250μs high-precision (short-cycle load) measurement, operating time measurement, wiring error detection and test output.

Energy Measuring Unit
EcoMonitor Light

Safety Precautions

To ensure safety, read the following items carefully before use and always comply with procedures during use. Special attention should be given to items enclosed in a box and marked "Caution." Additionally, please carefully read the operations manual supplied with the product before use, and ensure that the manual read by the end user as well.

1 Usage Environment and Conditions

Do not use these products under any of the following conditions. Doing so may cause erroneous operation and/or reduced service life.
- Ambient temperature is outside the range of -5°C to +55°C   • Daily average temperature over 35°C   • Relative humidity over 85% RH non-condensing
- Presence of excessive dust, corrosive gas, salt or oil/smoke   • Product is subject to excessive vibration or shock   • Product is in direct contact with rain, water drops or sunlight   • Altitude is above 2,000m   • Excessive external noise   • Pollution level is 2 or higher   • Transient overvoltage is 4,000V or higher   • Presence of metal fragments or conducting substances

2 Installation

Please note the following items regarding installation. To ensure safety, installation is to be performed by a qualified technical electrician.
- Affix the main unit to the panel before use   • The LCD display contrast changes depending on the angle from which it is viewed. Install it in a position that ensures a suitable angle of view.   • Tighten screws using a torque of approx. 0.3-0.5N·m   • To prevent damage to the LCD, take care not to subject the LCD/front of the main unit to shock/impact.

Auxiliary power supply and instrument ratings

Auxiliary power supply		100-240VAC (±15%) 50-60Hz 100-240VDC (−30%, +15%)
Instrument ratings	Voltage	Three phase, 4-wire: Max. 277/480VAC Three phase, 3-wire: Delta connection: Max. 220VAC, Star connection: Max. 440VAC Single phase, 3-wire: Max. 220/440VAC Single phase, 2-wire: Delta connection: Max. 220VAC, Star connection: Max. 440VAC
	Current	5A/1A
	Frequency	50-60Hz (dual use)

3 Connections

See pages 30-32 of this catalog for information regarding connections.

⚠ CAUTION	• To ensure safety, connections are to be performed by an electrical engineer qualified in wiring.
	• Check connection diagrams carefully before performing connections.
	  Incorrect connections may result in VT burnout caused by a VT secondary-side short circuit or high voltage on the CT secondary side, which may lead to device malfunction, fire or electrical shock.
	• Do not work with live wires; there is a risk of electric shock and exposure to high voltage due to short-circuiting or CT secondary side opening, which may lead to malfunction, fire or electrical shock.
	• Use electrical wire sizes compatible with the rated current. Use of unsuitable sizes may cause heat generation, which may lead to a fire.
	• After performing connections, check that no connections have been missed.
	  Missed connections may result in erroneous operation or high voltage on the CT secondary side, which may lead to a fire or electrical shock.
	• At the time of wiring, an electric wire can be broken by pulling with strong power.
	  (The load of pulling is less than 3-9 N)

4 Preparations Before Use

- Before use, perform settings such as the VT primary voltage, CT primary current, power scale and demand time limit in accordance with the operations manual supplied with the product; setting errors may cause incorrect measurement/operation.

5 Usage Procedures

- Use the products within the rated range. Using the products outside the rated range may cause erroneous operation or product malfunction.
- Do not use the products for special applications such as nuclear power, aerospace or medical devices/systems.

⚠ CAUTION	• Do not make any modifications to the products. Using products after modification may cause a malfunction, electrical shock or fire.

6 Repairing at Time of Malfunction/Error

- If a product listed in this catalog malfunctions, read the troubleshooting section of the operations manual (detailed version) and confirm the symptoms. If the problem is not listed, please contact a Mitsubishi Electric representative.

7 Maintenance/Inspections

- Wipe away any dust/dirt on the surface of the product with a soft cloth.
- Do not leave chemical cloths, etc. in contact with the product for long periods, and avoid the use of benzene, thinner, etc. when wiping the product surface. Doing so may cause deformation or cause the coating to peel away.
- To ensure correct use for the full service life of the product, please perform the following inspections:
  ①Check for damage to the product   ②Check for display malfunctions (e.g., does not respond to input)   ③Check for loose installation or terminal block wire connections (check regularly once every six months/year) always making sure that power has been turned off beforehand)   ④Check for unusual smell, noise or rise in temperature.

8 Storage

Do not store the product for long periods of time under any of the following conditions. Doing so may lead to a malfunction or reduced service life.
- Ambient temperature outside the range of -25°C to +75°C   • Daily average temperature of more than 35°C   • Relative humidity exceeding 85% RH or condensation present   • Excessive dust, corrosive gas, salt or oil/smoke present   • Product is subject to excessive vibration or shock   • Product is in direct contact with rain, water drops or sunlight

9 Disposal

- These products do not use nickel-cadmium batteries. Dispose of them as industrial waste.
- The optional module ME-0000BU-SS96 contains a lithium battery. Dispose of the battery in accordance with the municipal regulations.
- In EU member states, there is a separate collection system for used batteries. Dispose of the batteries properly at the local collection/recycling center. The following symbol is printed on the package of ME-0000BU-SS96.

This symbol is applicable only in EU member states. The symbol is designated in Article 20 "Information for end-users" and Annex II of the new European Directive on batteries (2006/66/EC).
The above symbol indicates that the batteries must be disposed of after separation from general waste.

⚠ CAUTION	• The optional module ME-0000BU-SS96 contains a lithium battery. Therefore, if it is thrown into the fire, it may generate heat, rupture or ignite. Dispose of the lithium battery in accordance with the municipal regulations.

10 Warranty Period

The warranty period for the products in this catalog expires one year from the date of purchase or one year and six months after the date of manufacture; whichever is earliest. Even during the warranty period, the warranty shall not apply to malfunctions attributable to intentional negligence or erroneous use by the customer, and the fee for any repair required as the result of such negligence shall be the liability of the customer.

Mitsubishi Electric shall not be liable for: Damage that cannot be attributed to Mitsubishi Electric; lost opportunity or earnings resulting from failure of a Mitsubishi Electric product; damage, secondary damage or compensation for an accident resulting from special circumstances regardless of whether or not the circumstances were foreseeable; or damage to products or other services for products not manufactured by Mitsubishi Electric.

11 Product Exchange Cycle

Although it depends on usage conditions, as a guide, it is recommended that the products listed in this catalog be renewed after 10 years.

●Trademarks
- MODBUS is a trademark of Schneider Electric USA Inc.
- Ethernet is a trademark of Fuji Xerox Co., Ltd.
- Other company and product names herein are trademarks or registered trademarks of their respective owners.
- In the text, trademark symbols such as "TM" and "®" may not be written.

Safety Tips: Be sure to read the instruction manual fully before using this product.

Precautions Before Use

- Please consult with a Mitsubishi Electric representative when considering the application of products presented in this catalogue with machinery or systems designed for specialized use such as nuclear power, electrical power, aerospace/outer space, medical, or passenger transportation vehicles.
- Mitsubishi Electric Corporation shall not be liable, to the customer or equipment user, for:
  1) Any damege found not to be attributable to a Mitsubishi Electric product.
  2) The loss of opportunity or profits for the customer or user caused by any fault in a Mitsubishi Electric product.
  3) Damege, secondary damege or accident compensation resulting from special factors regardless of whether or not such factors could be predicted by Mitsubishi Electric.
  4) Damege to products of other companies and/or guarantees relating to other services.

Eco Changes is the Mitsubishi Electric Group's environmental statement, and expresses the Group's stance on environmental management. Through a wide range of businesses, we are helping contribute to the realization of a sustainable society.

for a greener tomorrow
