

e-F@ctory Starter Package

Utilization of IoT in manufacturing

IoT technology adoption in manufacturing enables real-time monitoring of production equipment, manufacturing status, and product quality, making feedback to the equipment and operators easier, thereby realizing continuous cost down of the whole plant. Utilization of data managed through IoT realizes a powerful production site which is highly productive with quick response to failures.

Support IoT on the shop floor

The e-F@ctory starter package includes sample projects for the MELSEC iQ-R Series programmable controller and the GOT2000 Series human-machine interface. Programs for visualization and simple analysis are provided in sample project format, realizing IoT infrastructure on the shop floor just with basic settings such as device assignment and parameter registration. The starter package can help solve issues including consideration time and budget required for IoT system construction.

Highlights

- Programmable controller and GOT (HMI) realizes IoT infrastructure on the shop floor
- Sample projects of control program and screen design data provided
- Easily realize IoT with basic settings such as parameter registration

Various functions are available

Functions to realize IoT such as for "visualization" and "simple analysis" of production data are available as the e-F@ctory starter package. These functions can be utilized according to its application.

Realize IoT with minimum impact to the existing equipment

Adding a programmable controller and GOT (HMI) embedded with the e-F@ctory starter package can easily realize IoT in manufacturing with minimum impact to the existing equipment.

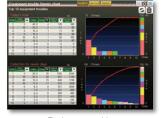

The e-F@ctory starter package is a package of sample projects for analyzing equipment information collected in the programmable controller and displaying analyzed results on the GOT (HMI). Designing complex analysis algorithms and graphs is unnecessary, realizing the equipment operation monitoring system at a lower cost.

e-F@ctory starter package GOT (HMI) screen examples*1

Dashboard

Process capability index (histogram)

Equipment trouble Pareto chart

Cylinder & cycle time measurement monitor

Product List

The e-F@ctory Starter Package is available as a package of multiple functions.

Equipment operation monitoring solution

Function name	Outline
Dashboard	Comprehensively displays the production and operational status of the equipment such as the equipment overall efficiency and number of production
Production counting	Displays the production status by product type and time zone by setting product type and time zone
Equipment trouble Pareto chart	Displays the status of an error stop alarm due to the operation rate drop in a Pareto chart
Cylinder & cycle time measurement monitor	Measures the operating status of the cylinder and the equipment operation cycle and monitors the error sign
Error sign inspection	Monitors error sign signals, and displays corrective actions registered in advance when an error sign appears
Error stop action	Monitors error stop signals, and displays corrective actions registered in advance when an error stop occurs
Loss time analysis	Measures the equipment non-operation time for each factor and displays the rate by total/time zone/date
Operational status monitor	Displays the equipment operational status of a day in a graph
Control chart (Xbar-R)	Displays the data collected from the equipment as the Xbar-R control chart in real time
Process capability index (histogram)	Displays the data collected from the equipment in a histogram and calculates the process capability index

Product specifications

Item		Туре
Available products	Programmable controller	MELSEC iQ-R Series*2
	GOT (HMI)	GOT2000 Series* ²
